

The Curve

Flat start, dip, knee, climb. When someone sees 'you are here' on a shape that ends well, the trough stops meaning failure.

1 Your example

2 MIN

Whose journey is this curve, and what do the axes measure?

The vertical axis choice IS the argument. Name it honestly.

2 The flat and the dip

WHERE QUITTING HAPPENS

The flat: what does the early grind feel like, from inside?

Their words, so they think: that's me.

The dip: what does it test, and how is it different from a dead end?

If you cannot name the difference, the model becomes a trap.

3 The knee and the climb

WHAT COMPOUNDS

The knee: the observable signal that the curve is about to turn

A signal, not a feeling: the first inbound DM, the first output in their voice.

The climb: what compounds once the knee passes?

The asset that accumulated silently during the flat.

Place your person on the curve, out loud

You are here. And this part is on the map.
