

The Four Rooms

Two tensions make four rooms, and everyone can suddenly see which room they are standing in.
Sorting into space beats arguing in words.

1 Your example

2 MIN

What decision or population are you sorting?

Tasks, clients, content, competitors: anything that needs four verdicts.

2 The two tensions

THE AXES

Horizontal axis, with both poles named

Reasonable people must be able to land on either end.

Vertical axis, with both poles named

3 Name the four rooms

NICKNAMES STICK

Top right (the target): name + what happens to things living here

Top left: name + what happens to things living here

Bottom left: name + what happens to things living here

Bottom right: name + what happens to things living here

4 The sort and the reveal

CHOREOGRAPHY

Place three real things on the board

The model only lands when real items get sorted.

The reveal

The room people THINK they are in versus the room they are in, or the hidden fifth space.
