

The Flywheel

A list says do these things. A loop says each thing makes the next one easier. That difference is momentum.

1 Your example

2 MIN

What system are you turning into a loop?

Anything meant to run on momentum instead of willpower.

2 The four parts

EACH FEEDS THE NEXT

Part 1: name + how it feeds part 2

Test: when this goes well, does the next genuinely get easier?

Part 2: name + how it feeds part 3

Test: when this goes well, does the next genuinely get easier?

Part 3: name + how it feeds part 4

Test: when this goes well, does the next genuinely get easier?

Part 4: name + how it feeds part 1

Test: when this goes well, does the next genuinely get easier?

The fuel: what compounds in the center? (3 words max)

Trust, data, proof, audience, skill.

3 Push and drag

THE PHYSICS

The first push: how does the wheel start from zero?

Small, manual, unglamorous.

The drag: what slows the wheel, and how do you remove it?

The punchline

Usually: you don't need more effort, you need the turns to add up.
