

# The Rings

What lives at the center, what orbits it, and what stays outside. Rings sort a messy world by closeness to the one thing that matters. Fill from the center outward.

## 1 Your example

2 MIN

**What are you sorting into rings?**

*Offers by closeness to your genius, audience by intimacy, your week by priority. Name the world you are organising.*

## 2 The center

DRAWN FIRST, ALWAYS

**What is the one thing everything else orbits?**

*The test: if this disappeared, the rest would be pointless.*

**The center, compressed to three words**

## 3 The three rings

CLOSEST TO FARTEST

**Ring 1**

*What touches the core directly. Fewest things, most of you.*

**Ring 1, compressed to five words or fewer**

**Ring 2**

*The middle distance.*

**Ring 2, compressed to five words or fewer**

### Ring 3

*Barely inside the model. Most things, least of you.*

**Ring 3, compressed to five words or fewer**

4

### Outside the rings

THE PUNCHLINE

**What is deliberately outside, and why?**

*A rings model without a named outside is a decoration.*

### The punchline

*Usually: most people work from the outside in. We work from the center out.*
